Cloud Phase 2 Cloud Dashboard Project

1. Architecture & Services

- **Azure Functions:** Serves as the backend REST API, processing the CSV data and exposing endpoints for insights, recipes, and clusters on-demand.
- **Azure Static Web Apps:** Hosts the frontend UI and automatically deploys our code directly from GitHub.
- **GitHub:** Manages version control, enabling independent frontend/backend workflows and CI/CD.

2. Challenges and Solutions

- CORS Policies: Initially, fetching backend data was prohibited from the frontend. The Static Web App domain was added to the Azure Function's permitted CORS list to resolve the issue.
- Cloud Configuration: Leaving local.settings behind.JSON required the live storage connection strings to be carefully set up in the Azure portal environment variables.

Prepare for production (0/3 completed)

Add a custom domain
Add a custom domain and use Azure Domain Name System to manage your domains.

Upgrade your hosting plan
Upgrade your hosting plan for increased file and bandwidth limits and an uptime service level agreement (SLA).

Enable enterprise grade edge
Enable faster page loads, enhance security, and optimize reliability for your global applications with the power of Azure Front Door.
